

ABSTRACT OF THE DISCLOSURE

The present invention is an apparatus for the money transactions required in the selling of merchandise or media content on the Internet and uses at least one in-person contact with the buyer. A predefined transaction originating at a real place of business authorizes access to web content or merchandise from a place off the web. Purchasers (end-users) must physically go to a retail location to choose the Internet media or merchandise shopping cart they wish to acquire where age can be verified if necessary and payment can be made with or without a credit card. Content security using a non-audible or invisible code signal sequence(s) can provide traceability as well as absolute anonymity for the purchaser. This apparatus can be used to conduct transactions off the web so that business can be done on the web.
